

Young Actuaries Program

Wider Fields and Broader Horizons

Presented by: Wade Tubman and Elayne Grace

Tuesday 27 November 2012
6.00pm - 8.00pm
Actuaries Institute
Level 7, 4 Martin Place, Sydney 2000

Sydney

In recent years, there has been a change in the air. Actuaries are thinking outside the traditional box, with non-traditional actuarial work becoming increasingly fascinating and lucrative. In this session we are excited to bring you two crusading actuaries who are forging the way for actuarial involvement in data analytics and climate change.

Wade Tubman and Elayne Grace are both experienced senior actuaries who will speak about the types of work actuaries are doing in these fields, the future opportunities and the value of actuarial advice in these areas. Our speakers will also discuss how you can position yourself to work in these non-traditional areas.

Wade Tubman

Wade Tubman is a Principal of Quantum with over 15 years actuarial experience covering business and customer analytics and the modelling and management of value and risk. At Quantum, Wade and his team of actuarial "data scientists" are combining traditional technical skills with big data and business acumen to drive value across wider industries. He is also a regular presenter at both actuarial and wider-field conferences and industry forums.

Elayne Grace

Elayne is the lecturer and examiner of the Environment module of the Institute's Commercial Actuarial Practice course. In 2008, Elayne was an Executive Director in Ernst & Young's climate change risk advisory services group and prior to this, the Sustainability Research Manager with Insurance Australia Group (IAG), responsible for developing IAG's climate change and carbon strategy. Elayne has presented at many international workshops including those organised by the Australian and New Zealand Greenhouse Office and European Climate Forum.

- Places are limited so registration is essential.
- Drinks and nibbles will be provided.
- The presentation will start from 6.30pm.
